**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. Claims 1-4, 8-10, 12-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kleeberger et al in view of Cumming as discussed in paragraph 2 of the last office action.
2. Applicant's arguments filed 7/16/2003 have been fully considered but they are not persuasive. In response to applicant's argument that the references are not properly combined, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981). In this case, the secondary reference is being used to show a folding mechanism that folds a product into a compact folded configuration. The examiner also notes that expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim. See ex parte Thibault, 164 USPQ 666, 667 (Bd. App. 1969).

In response to applicant's argument regarding primary reference Kleeberger et al, the examiner notes the secondary reference is being used to show the folding operation with the angular movement of the product to orient the product.

In response to applicants argument regarding the pivoting limitation in claim 10, the examiner notes that the manner of mounting is a matter of design choice and that

Art Unit: 3721

pivotally mounted elements are pivotable for adjustable reasons. The provision of adjustability, where needed, is not a patentable advance. See *in re Stevens*, 101 USPQ 284 (CCPA 1954).

In response to applicants argument regarding Cumming, the examiner notes that Cumming discloses that the ram compresses the product and engages the curved arcuate wall (col 6 lines 28+). The ram is controlling the movement of the product and, therefore, must move in a radial manner to move the product as shown in figures 19-21. Cumming shows a tube with an upwardly and downwardly curved surface as shown in figure 20.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

4. Claims 5-7, 11 are allowed.
